

Flu Watch

MMWR Week 48: November 26 to December 2, 2017

All data are provisional and subject to change as more reports are received.

Geographic Spread

South Carolina reported **regional activity** this week. This is the **fifth** consecutive week at regional activity.

Influenza-Associated Hospitalizations and Deaths

A total of **41** influenza-associated hospitalizations were reported by 50 hospitals. The cumulative hospitalization rate is **2.9** per 100,000. There was **1** laboratory-confirmed influenza-associated death reported. The cumulative mortality rate is **0.04** per 100,000. Compared to the previous week, the number of reported hospitalizations **increased** by 12 (41.4%). In the current flu season, there have been **142** influenza-associated hospitalizations and **2** influenza-associated deaths reported.

Virologic Surveillance

A total of **641** influenza cases (**619** positive rapid antigen detection tests; **22** lab-confirmed tests) were reported from 32 counties representing all four DHEC Public Health regions. Influenza A was most frequently reported by clinical labs. Compared to the previous week, this is an **increase** of 197 cases (44.4%). In the current flu season, there have been **2,542** influenza cases (2,465 positive rapid antigen detection tests; 77 lab-confirmed tests) reported.

For a description of South Carolina's influenza surveillance components and definitions go to: http://www.scdhec.gov/Health/DiseasesandConditions/

ili

Influenza-Like Illness Surveillance

The percent of patient visits to sentinel providers for an influenza-like illness (ILI) was **3.89%**, which is **above** South Carolina's baseline **(3.13%)**. Compared to the previous week, this is an **increase** of **0.17%**.

The ILI activity level was **high.**

For national surveillance, please visit: https://www.cdc.gov/flu/weekly/

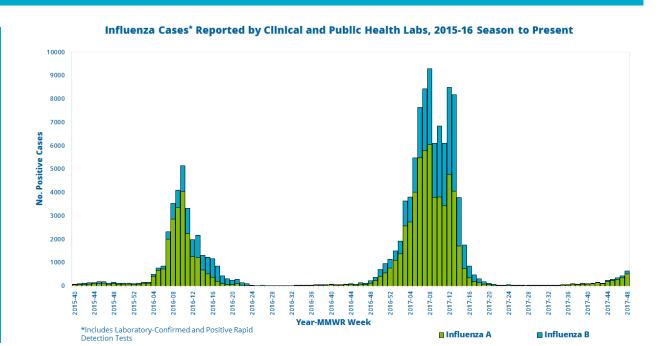

Virologic Surveillance

This week, **22** lab-confirmed cases and **619** positive rapid influenza detection tests were reported by clinical lab and public health labs.

The percentage of specimens sent to the state public health lab that tested positive for influenza was **75%.**

Influenza A was most frequently reported by clinical labs while **Influenza B** (**Yamagata**) was reported by the state public health lab.

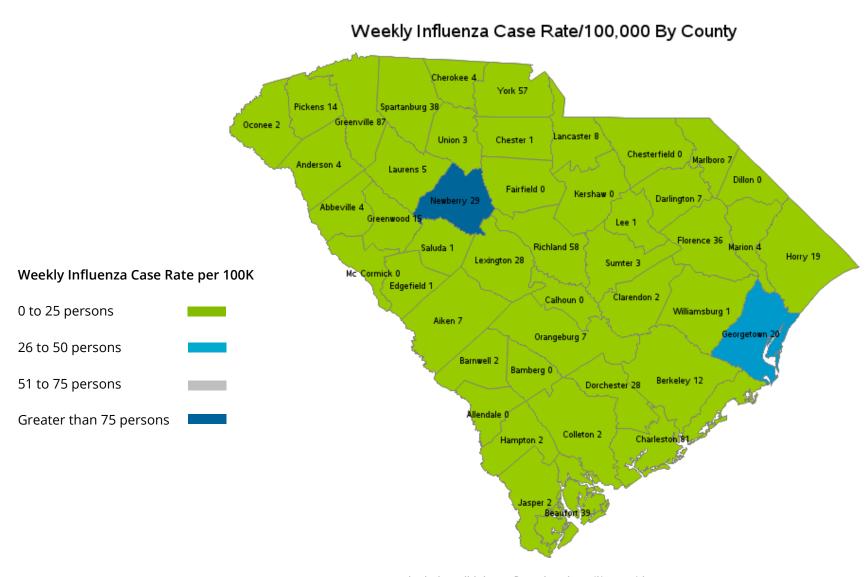

Influenza Cases Reported by Public Health and Clinical Labs, This Week and Season Total

Influenza Type	Public	c Health Lab	Cli	nical Labs	Total		
	This Week	Season Total	This Week	Season Total	This Week	Season Total	
Overall	1	9	640	2533	641	2542

Virologic Surveillance

Includes all lab-confirmed and positive rapid cases

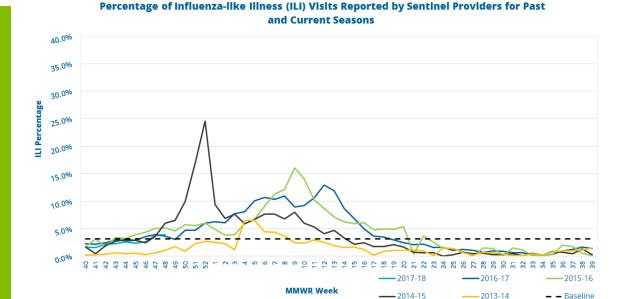

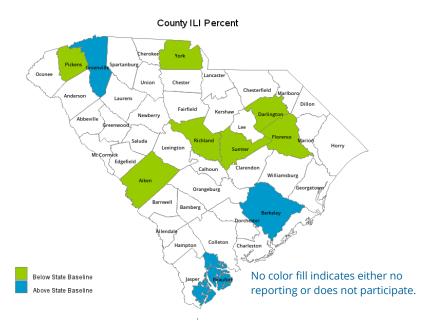

Influenza-Like Illness Surveillance

This week, the ILI activity level was **high** and **3.89%** of patient visits to SC ILINet providers was attributed to an influenza-like illness. This is **above** the state baseline, **3.13%**.

Reports were received from providers in 10 counties, representing all 4 DHEC Public Health regions.

ILI percentage is dependent upon the number of reporting providers and/or can vary by disease activity or the number of providers submitting reports.

State ILI Activity Level 2017-18 Calendar by Week of the Year
